Some institutions offer assessment prep courses for teacher candidates. There is a lack of guidance and support provided to prepare for the test. Teachers expressed a lack of confidence in specific subject areas (i.e., math).

We have a bit of a backlog of students who, for all intents and purposes, are prepared. They've taken all of their courses. They've fulfilled all of their required internship hours, so they are ready to student teach. However, it is the assessments that kept me from going into music ed for a couple of years, because I asked for a voucher to help pay for the test and the school refused. So, I took my writing seven until I finally passed. It was very stressful. This is how it went. I took my reading twice. I took my math seven times and I took my writing seven until I finally graduated.

It costs a lot for our students to take these tests. It is a financial hardship for a lot of students. I’m a very good student with a GPA over 3.0, but for me, it ended up being kind of the moment that led me from going into music ed for a couple of years, because I asked for a voucher to help pay for the test and the school refused. So, I just couldn’t afford it.

For me, there was no feedback on what you got incorrect, it was just, you passed, or you didn’t, and then thepraxis. And so, that also added to the anxiety of whether or not I was going to be able to pass. —K12 Teacher and Educator Preparation Program Alumni

Entrance assessments do not address important pedagogical skills or measures in a way that is authentic and realistic. There is a lack of feedback on previous attempts leads to increased anxiety and an inability to study effectively. Fear of being dissuaded from becoming a teacher if unable to pass the test. The three tests you have to take ARE wild. Financially, where is all this money coming from (to pay for all these tests)? I’m a college student [already using student loans to survive]. —Teacher Candidate

Recommendations

• Investigate and eliminate racial bias in the test.
• Drop entrance assessments and offer multiple pathways to demonstrate competency.
• Develop assessments that are more aligned with what teachers are expected to demonstrate in the classroom.
• Offer more test preparation in program courses.
• Pass state legislation that rectifies the racial disparity problem in performance assessments by introducing legislation that promotes alternatives to Praxis Core and other basic skills tests required for program entry.
• Develop assessments that are more aligned with what teachers are expected to demonstrate in the classroom.

What Teachers, Candidates, and Faculty Are Saying about Program Entrance Assessments

There was no feedback on what you got incorrect, it was just, you passed, or you didn’t, and then thepraxis. And so, that also added to the anxiety of whether or not I was going to be able to pass. —K12 Teacher and Educator Preparation Program Alumni

The Impact of Program Entrance Assessments on Aspiring Teachers and the Teacher-of-Color Pipeline

The American Association of Colleges of Teacher Education’s Consortium for Research-Based and Equitable Assessments (CREA) seeks to address barriers that serve as a gateway into educator preparation programs, with a specific focus on entrance assessment cut scores (i.e., Praxis Core, state-developed basic skills assessments). To learn about the impact of entrance assessments on key stakeholder groups, the CREA project conducted focus groups with in-service teachers, teacher candidates of color, and faculty at historically black colleges and universities (HBCUs). This infographic depicts the key focus group findings.

Impact on Enrollment and Completion

• Student enrollment at participating educator preparation programs has declined by 50%-60% because students miss the cut-off scores by a few points.
• Fewer students are completing their program because they are unable to pass testing requirements.
